

FORTIFIED CARDS

Credit/Debit cards are the most widely used means for purchasing any item/utility

Fortified Cards is a revamped design of the current debit/credit cards.

Involvement of future users is important in this security critical decision

RE techniques are used to find out user's acceptance of this idea

Application of a set of artifacts to elicit requirements

Users are made responsible for their own security

Future Scope:

- Embedded system will be included
- Mobile applications on all platforms like Android, iOS, Windows will be implemented.
- A website which will block the Fortified Card immediately incase of theft
- A study on the impact of scope creep on System Development and on the usefulness of System Vision in further stakeholder interactions will be carried out.
